

Diagnosis Rates of HIV/AIDS for Black Adults and Adolescents, 2000–2004—33 States

Note. Data include persons with a diagnosis of HIV infection regardless of AIDS status at diagnosis. Data from 33 states with confidential name-based HIV infection reporting since at least 2000. Data excludes cases from the US dependencies, possessions and associated nations because of the lack of census information by race and age categories for these areas. Data have been adjusted for reporting delays.
